

CA Lab - simplify your LabVIEW™-EPICS communication

29th April - 3rd May

Introduction

1. Why another interface between LabVIEW™ and EPICS?
2. The technical realisation of the project
3. How is the handling for end users?

29th April - 3rd May

Reasons

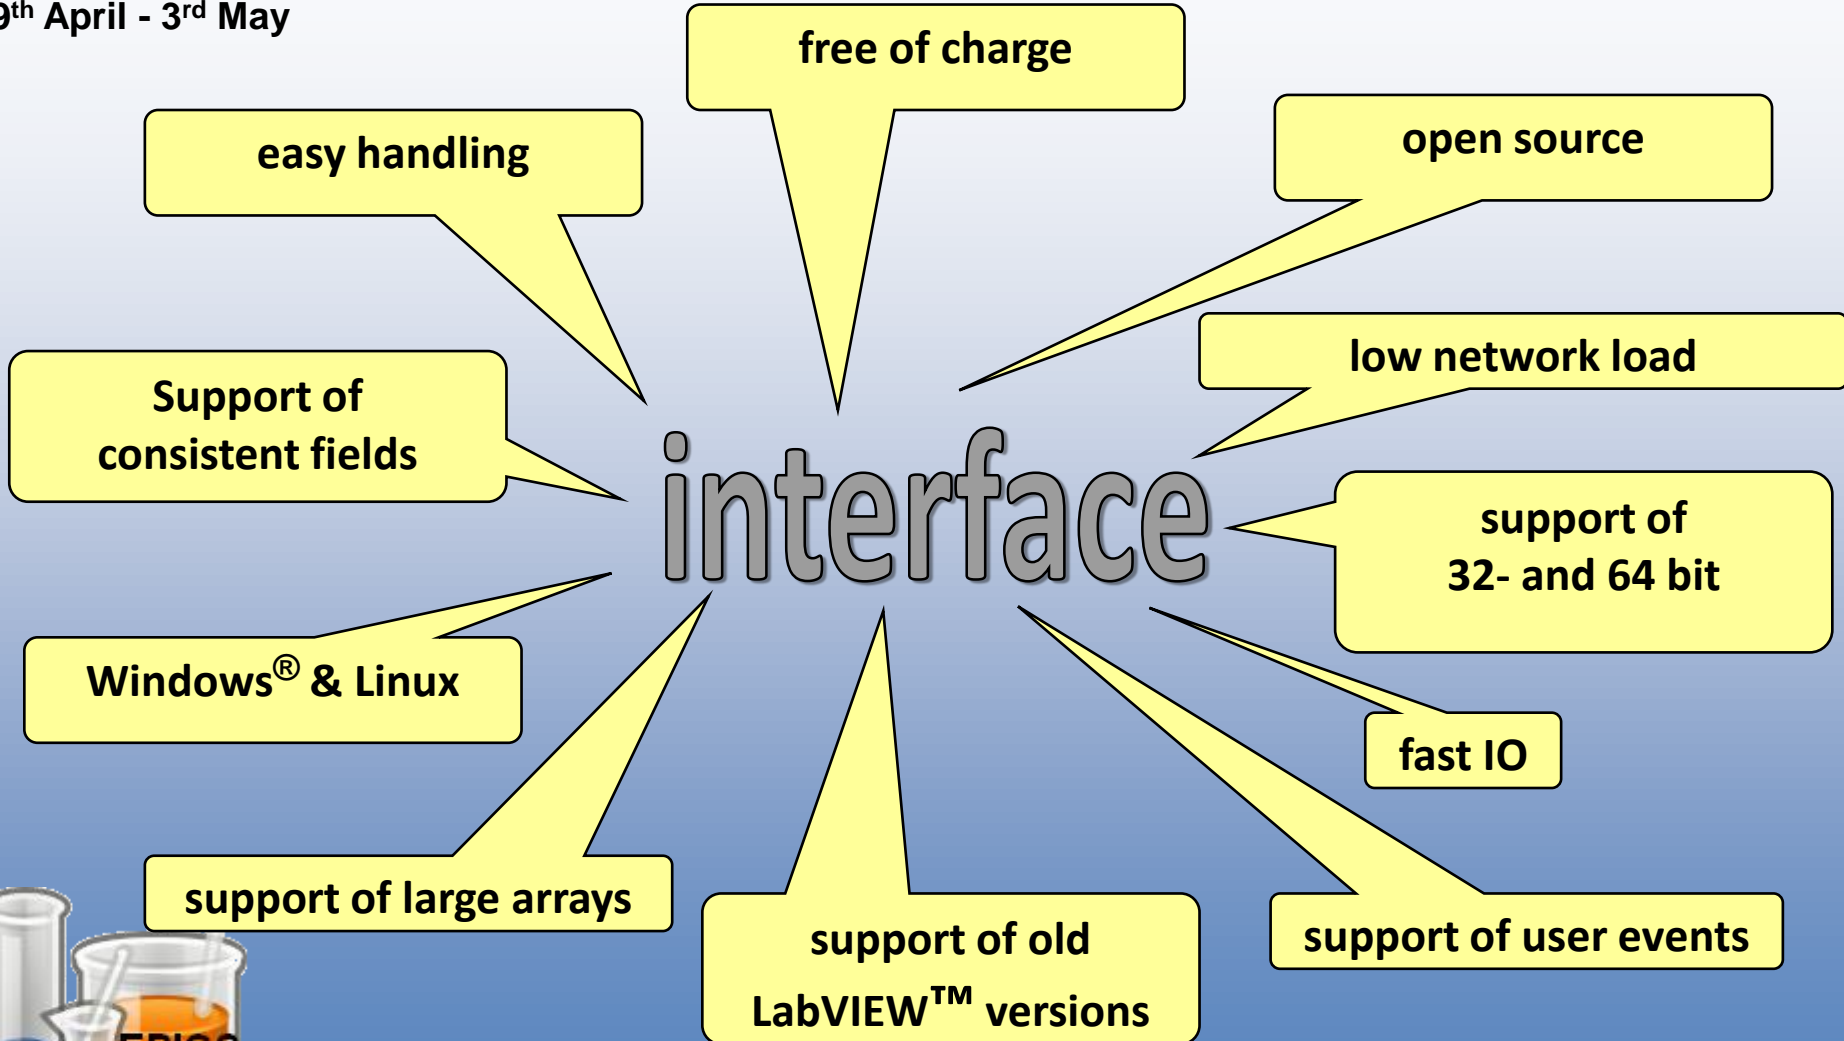

- + Guest researchers at BESSY like LabVIEW™
- + Beamlines are operable via EPICS
- + Operation status of BESSY is available via EPICS
- ➔ Calling for suitable interface

Requirements

29th April - 3rd May

Free Solutions in 2009

29th April - 3rd May

1. EPICS I/O Client from

2. LabVIEW™ Channel Access Client from

3. ... some more

Significant problems

Existing difficulties

- ❌ Dependency of external services
- ❌ Error-prone for newcomers
- ❌ Incomplete implementations of
 - ❌ Data types
 - ❌ EPICS fields
 - ❌ Enumerations

Solution

29th April - 3rd May

- + Directly based on the EPICS base
- + Supports all EPICS data types
- + Any number of consistent fields per EPICS variable
- + LabVIEW™ 7.0 to 2012 on Windows® and Linux
- + Monitoring und Caching → low network load

Solution

29th April - 3rd May

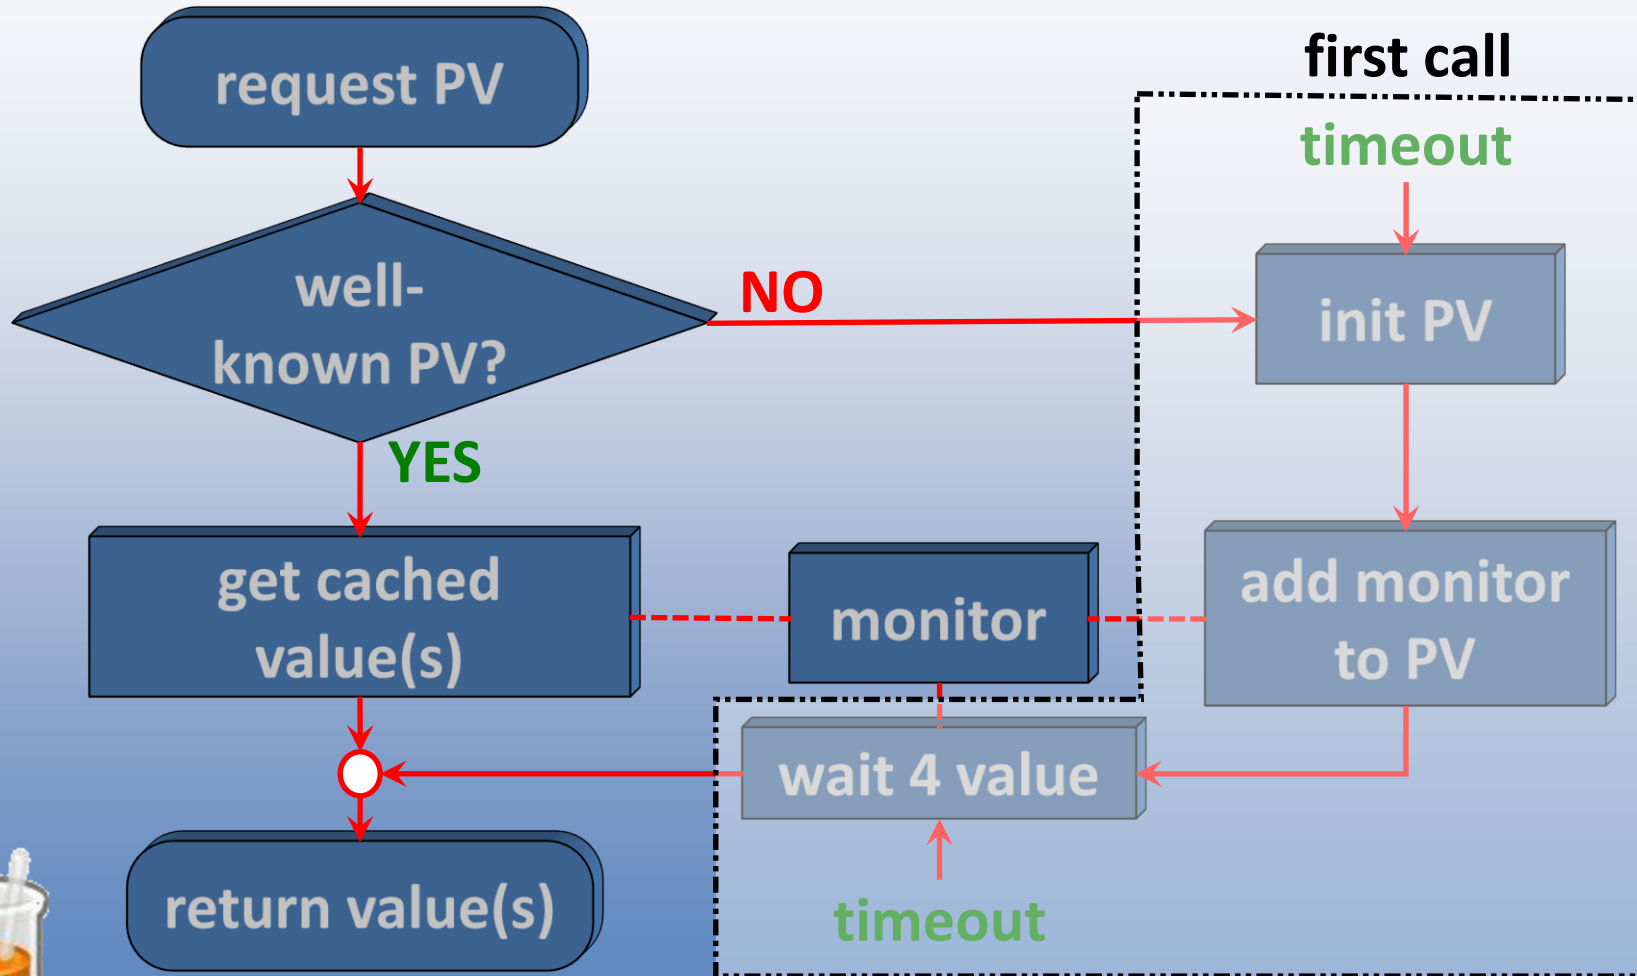

- ❌ EPICS client only
- ❌ Not available for realtime units
- ❌ 3 additional native libraries
 - ❌ CaLab
 - ❌ ca (EPICS base)
 - ❌ Com (EPICS base)

Solution

29th April - 3rd May

29th April - 3rd May

Conclusion

29th April - 3rd May

- Very easy handling of EPICS variables in LabVIEW™
- All requirements have been met
- In use at BESSY since 2009 (beamline control, machine tools)
- Continuous development
 - Better error handling in VIs
